

Portland Cement Types I, II, III

Manufacturer:

Kosmos Cement Company

15301 Dixie Highway - Louisville, KY 40272

(502) 933-0122 - www.kosmoscement.com

Product Description and Basic Uses:

The Kosmos Cement plant produces portland cements which meet the requirements for both Type I and Type II, and may be designated as Type I,II. Some cements are formulated with a maximum alkali content of 0.60%, and are available upon request.

Type I

General-purpose cement that is suitable for all uses where the special properties of other types of portland cement are not required.

Type II

Moderate sulfate resistance and moderate heat of hydration properties. Used when the referenced properties are desired.

Type III

Provides higher strengths at earlier ages as compared to Type I. Type III is very similar to Type I, except its particles have been ground finer, making it more reactive. Type III portland cements are useful when quick form turn-around times are desired.

Quality:

Kosmos Cement Company is committed to quality and takes pride in the products we manufacturer. We use only high quality raw materials and strict quality control procedures, and are the local leader in quality cement production.

Standards:

Type I, Type II, Type III cements meet the standard requirements of ASTM C150 / AASHTO M85, Standard Specification for Portland Cement.

Additional Information:

Additional information can be obtained by visiting:
